DIGITAL LITERACY PROJECT REPORT

Name: Siddhant Aggarwal

Reg No: 25BCY10082

Branch: B.Tech CSE (Cyber Security & Digital Forensics)

Year: 1st Year

Course Code: CSE0001

Course Title: Digital Literacy

Date: 31st March, 2026

Introduction

Digital literacy is an essential skill in today's technology-driven world. This project aims to develop awareness and understanding of various digital tools, online communication methods, and cyber safety practices. As a Student Digital Ambassador, the objective is to help peers use digital platforms effectively and responsibly.

The project consists of five tasks, including creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, understanding

professional communication, and studying cybercrime awareness. Each task focuses on a different aspect of digital literacy and provides practical exposure to real-world tools and scenarios.

Through this project, I have gained valuable insights into maintaining a professional online presence and staying safe in the digital environment.

Task 1 – Infographic

For this task, I created a digital literacy awareness infographic using Canva. The infographic highlights key aspects such as what digital literacy means, useful digital tools for students, safe internet practices, and email etiquette.

The design was structured into sections with simple text and visual icons to make it easy to understand. I focused on keeping the content clear and concise so that students can quickly grasp the information. Canva provided various templates and design elements that helped in creating an attractive and informative infographic.

One interesting aspect of this task was learning how to present information visually rather than in long text. The challenging part was organizing multiple topics into a single page while maintaining clarity and balance. Overall, this task improved my creativity and design skills.

Task 2 – Digital Portfolio

In this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. These platforms are essential for building a professional digital presence. GitHub is used for sharing projects and collaborating on code, LinkedIn helps in professional networking, and Kaggle is useful for learning data science and practicing skills.

I created a GitHub profile README that includes my basic details and learning goals. On LinkedIn, I completed my education details to make my profile professional. These platforms will help me showcase my skills and achievements over time.

In the next four years, I plan to actively use these platforms by uploading projects, connecting with professionals, and participating in competitions. This

will help me build a strong portfolio and improve my career opportunities

Task 3 – Coding & Collaboration Platforms

For this task, I used HackerRank as a coding practice platform and completed a beginner-level problem called "Solve Me First." This helped me understand the basic structure of coding problems and how to write simple programs.

Additionally, I created a Google Form to conduct a digital literacy awareness quiz. The form included multiple-choice and short-answer questions. I also viewed responses using Google Sheets, which helped me understand data collection and analysis.

These tools are very useful for academic learning and collaboration. HackerRank helps in improving programming skills, while Google Forms is useful for conducting surveys and quizzes. This task enhanced my practical understanding of digital tools and their applications.

Task 4 – Email Etiquette

In this task, I learned how to write professional emails and understand proper communication etiquette. I drafted two emails: one requesting an assignment extension and another applying for an internship.

I understood the importance of using a clear subject line, polite tone, and proper structure. Poor communication can lead to misunderstandings and negative impressions. For example, sending informal or unclear emails to professors can create confusion and may not be taken seriously.

By following proper email etiquette, communication becomes more effective and professional.

Task 5 – Cybercrime Awareness

While researching cybercrime, I focused on UPI fraud, which is very common in India. I learned how attackers trick users into making payments by using fake links or QR codes.

What surprised me most was how easily people can fall for such scams due to lack of awareness. Even simple mistakes like entering a UPI PIN can lead to financial loss.

As a result, I will be more cautious while making online transactions and will always verify payment requests before proceeding.

Conclusion

This project helped me understand the importance of digital literacy in today's world. I learned how to use online tools, communicate professionally, and stay safe from cyber threats. Each task provided practical knowledge that will be useful in my academic and professional journey. Overall, this project enhanced my technical, communication, and awareness skills, making me more confident in using digital platforms responsibly.
